**PhD Scheme and Syllabus (Computer Science & Engineering)**

S. No.	Course No.	Course Title	Teaching Schedule	
			L	P
1.	TRM 701	RESEARCH METHODOLOGY	4	-
2. 1	TCS 801	SOFTWARE VERIFICATION, VALIDATION & TESTING	4	-
3.	TCS 802	PROGRAMMING PARADIGMS	4	-
4. 2	TCS 803	ADVANCED DATA STRUCTURES AND ALGORITHMS	4	-
5. 3	TCS 804	DISTRIBUTED DATABASE	4	-
6. 4	TCS 805	DISTRIBUTED SYSTEM AND APPLICATION	4	-
7. 5	TCS 806	ENERGY EFFICIENT COMPUTING TECHNOLOGY	4	-
8. 6	TCS 807	RELIABLE COMPUTING	4	-
9.	TCS 808	PARALLEL ALGORITHMS	4	-
10. 7	TCS 809	APPROXIMATION ALGORITHMS	4	-
11.	TCS 810	NATURAL LANGUAGE PROCESSING	4	-
12.	TCS 811	CASE STUDY (SEMINAR +IMPLEMENTATION)		4

**w.e.f: 2012-13**

**TCS 801: Software Verification, Validation & Testing**  
**Ph. D Course Work ( Computer Science & Engg.)**

<b>L</b>	<b>P</b>	<b>Credits</b>	<b>Class Work</b>	<b>:50</b>
<b>Marks</b>				
<b>4</b>	<b>-</b>	<b>4</b>	<b>Exam.</b>	<b>:100 Marks</b>
			<b>Total</b>	<b>:150 Marks</b>
			<b>Duration of Exam</b>	<b>: 3</b>

**Hrs.**

**Unit 1**

**Introduction:** What is software testing and why it is so hard?, Error, Fault, Failure, Incident, Test Cases, Testing Process, Limitations of Testing, No absolute proof of correctness, Overview of Graph Theory.

**Functional Testing:** Boundary Value Analysis, Equivalence Class Testing, Decision Table Based Testing, Cause Effect Graphing Technique.

**Unit 2**

**Structural Testing:** Path testing, DD-Paths, Cyclomatic Complexity, Graph Metrics, Data Flow Testing, Mutation testing.

**Testing Activities:** Unit Testing, Levels of Testing, Integration Testing, System Testing, Debugging, Domain Testing.

**Unit 3**

**Reducing the number of test cases:** Prioritization guidelines, Priority category, Scheme, Risk Analysis, Regression Testing, and Slice based testing

**Object Oriented Testing:** Issues in Object Oriented Testing, Class Testing, GUI Testing, Object Oriented Integration and System Testing.

**Unit 4**

**Testing Tools:** Static Testing Tools, Dynamic Testing Tools, and Characteristics of Modern Tools and Implementation with example. Advanced topics in software testing: web based testing, Client server testing, Automated test cases generation, Regular expression and FSM based testing.

**TCS 802: Programming Paradigms  
Ph. D Course Work ( Computer Science & Engg.)**

<b>L</b>	<b>P</b>	<b>Credits</b>			<b>Class Work :50</b>
<b>Marks</b>					
<b>4</b>	<b>-</b>	<b>4</b>		<b>Exam.</b>	<b>:100 Marks</b>
				<b>Total</b>	<b>:150 Marks</b>
				<b>Duration of Exam</b>	<b>: 3</b>
<b>Hrs.</b>					

**Objective:** To introduce semantics of programming languages and develop skills in describing, analyzing and using the features of programming languages.

**Unit-1**

Introduction to different paradigms of programming -Imperative - Object Oriented – Functional- Logic.

**Unit-2**

Imperative and Object-oriented Programming - Role of Types - Static and Dynamic Type Checking - Scope rules; Grouping Data and operations, Information Hiding and Abstract Data Types, Objects, Inheritance, Polymorphism, Templates.

**Unit-3**

Functional Programming - Expressions and Lists, Evaluation, types, type systems, values and operations, function declarations, lexical scope, lists and programming with lists, polymorphic functions, higher order and Curried functions, abstract data types.

**Unit-4**

Logic Programming - Review of predicate logic, clausal-form logic, logic as a programming language, Unification algorithm, Abstract interpreter for logic programs, Semantics of logic programs.

**TCS 803: Advanced Data Structures and Algorithms**  
**Ph. D Course Work ( Computer Science & Engg.)**

<b>L</b>	<b>P</b>	<b>Credits</b>			<b>Class Work</b>	<b>:50</b>
<b>Marks</b>						
<b>4</b>	<b>-</b>	<b>4</b>			<b>Exam.</b>	<b>:100 Marks</b>
					<b>Total</b>	<b>:150 Marks</b>
					<b>Duration of Exam</b>	<b>: 3</b>
<b>Hrs.</b>						

**Unit 1**

Review of Basic Concepts: Abstract data types, Data structures, Algorithms, Big Oh, Small Oh, Omega and Theta notations, Solving recurrence equations, Master theorems, Generating function techniques.

**Unit 2**

Advanced Search Structures for Dictionary ADT: Splay trees, Amortized analysis, 2-3 trees, 2-3-4 trees, Red-black trees, Skip lists, Universal hash functions.

**Unit 3**

Advanced Structures for Priority Queues and Their Extensions: Binomial heaps, Leftist heaps, Skewed heaps, Fibonacci heaps and its amortized analysis, Applications to minimum spanning tree algorithms

**Unit 4**

Graph Algorithms: DFS, BFS, Bi-connected components, Cut vertices, Matching, Network flow. Lower Bound Theory: Adversary arguments, information theory bounds

**TCS 804: Distributed Database  
Ph. D Course Work ( Computer Science & Engg.)**

<b>L</b>	<b>P</b>	<b>Credits</b>	<b>Class Work</b>	<b>:50</b>
<b>Marks</b>				
<b>4</b>	<b>-</b>	<b>4</b>	<b>Exam.</b>	<b>:100 Marks</b>
			<b>Total</b>	<b>:150 Marks</b>
			<b>Duration of Exam</b>	<b>: 3</b>
<b>Hrs.</b>				

Distributed and parallel databases concepts – autonomy, distribution, and heterogeneity. Client/server, parallel and distributed architectures. Design strategies. Horizontal, vertical and hybrid fragmentation. Resource allocation. Transaction model, serialization and recovery. Concurrency control, Deadlock management and Distributed deadlock, reliability and availability, load balancing, Schema translation & Integration, multi databases and multi-dimensional indices.

**TCS 805: Distributed System & Application**  
**Ph. D Course Work ( Computer Science & Engg.)**

<b>L</b>	<b>P</b>	<b>Credits</b>	<b>Class Work</b>	<b>:50</b>
<b>Marks</b>				
<b>4</b>	<b>-</b>	<b>4</b>	<b>Exam.</b>	<b>:100 Marks</b>
			<b>Total</b>	<b>:150 Marks</b>
			<b>Duration of Exam</b>	<b>: 3</b>

**Hrs.**

**UNIT 1**

**INTRODUCTION** :Introduction to Distributed systems-examples of distributed systems, challenges-architectural models- fundamental models - Introduction to interprocess communications-external data representation and marshalling- client server communication-group communication – Case study: IPC in UNIX

**UNIT 2**

**DISTRIBUTED OBJECTS AND FILE SYSTEM** :Introduction - Communication between distributed objects - Remote procedure call - Events and notifications - Java RMI case Study - Introduction to DFS - File service architecture - Sun network file system - Introduction to Name Services- Name services and DNS - Directory and directory services

**UNIT 3**

**DISTRIBUTED OPERATING SYSTEM SUPPORT** :The operating system layer – Protection - Process and threads - Communication and invocation - Operating system architecture - Introduction to time and global states - Clocks, Events and Process states - Synchronizing physical clocks - Logical time and logical clocks - Global states - Distributed debugging – Distributed mutual exclusion.

**UNIT 4**

**TRANSACTION AND CONCURRENCY CONTROL – DISTRIBUTED TRANSACTIONS**

Transactions – Nested transaction – Locks - Optimistic concurrency control - Timestamp ordering Comparison of methods for concurrency control - Introduction to distributed transactions - Flat and nested distributed transactions - Atomic commit protocols - Concurrency control in distributed transactions - Distributed deadlocks - Transaction recovery

**UNIT 5**

**SECURITY AND REPLICATION** :Overview of security techniques - Cryptographic algorithms Digital signatures - Cryptography pragmatics – Replication - System model and group communications – Fault tolerant services – Highly available services – Transactions with replicated data George Coulouris, Jean Dollimore, Tim Kindberg “Distributed Systems Concepts and Design” Third Edition – 2002- Pearson Education Asia.

### **TCS 806: Energy Efficient Computing and Technologies Ph. D Course Work ( Computer Science & Engg.)**

<b>L</b>	<b>P</b>	<b>Credits</b>	<b>Class Work</b>	<b>:50</b>
<b>Marks</b>				
<b>4</b>	<b>-</b>	<b>4</b>	<b>Exam.</b>	<b>:100 Marks</b>
			<b>Total</b>	<b>:150 Marks</b>
			<b>Duration of Exam</b>	<b>: 3</b>
<b>Hrs.</b>				

**Objective:** To expose the students basic to some advanced features of different types of ad hoc networks with case studies. It also gives a direction to the students about distributed system design model & implementation.

#### **Unit 1**

**Overview of Ad Hoc Networks:** Why Ad Hoc Networks?, Challenges, and benefits of Mobile Computing, Breakthrough Technology, Wireless Computing, Nomadic Computing, Mobile Computing, Ubiquitous Computing, Pervasive Computing, Invisible Computing, Applications of mobile computing, Wireless and Mobile Computing Models, LAN Protocols: IEEE 802.11/a/g/n & Bluetooth, Data Management Issues. Sensor Networks- Challenges, Architecture, and Applications.

#### **Unit 2**

**Routing:** Taxonomy, Applications, Challenges in Mobile Environments, Hidden and exposed terminal problems, Routing Protocols- Proactive, Reactive, and Hybrid protocols, Dynamic State Routing (DSR), Ad hoc On-Demand Distance Vector (AODV), Destination Sequenced Distance – Vector Routing (DSDV), and Cluster Based Routing Protocol (CBRP), and Temporally Ordered Routing algorithm (TORA).

#### **Unit 3**

**Distributed location Management:** Pointer forwarding strategies, Process communication techniques, socket programming, Remote Procedure Call (RPC), Remote Method Invocation (RMI), client/server programming, Mobile IP- Problem with Mobility, Terminology, Operation, Tunneling, Data transfer to the mobile system, Transport Control Protocol (TCP) Over wireless- Indirect TCP (I-TCP), Snoop TCP, Mobile TCP (M-TCP), Case Study of Client/Server architecture.

## Unit 4

**Fault tolerance and Security:** Mobile Agents Computing, Security- Issues and Mechanisms, Certificate, Secure Agent Transfer, Timestamp Tamper-proofing, Secure Agent Reception, Host Protection, Providing Security and Integrity to Agent Data and State, Securing Agent Itineraries, Security Architecture, fault tolerance- Issues and Mechanisms, Agent Failure Scenarios, Node (host) Failure Detection and Recovery, Agent Failure Detection and Recovery, Communication Failure Detection and Recovery, Fault Tolerant System-3-Layered Monitor System, transaction processing in Mobile computing environment. Mobile Agent Systems: Aglets, PMADE and Case Study.

**TCS 807:Reliable Computing**

**Ph. D Course Work ( Computer Science & Engg.)**

<b>L</b>	<b>P</b>	<b>Credits</b>	<b>Class Work</b>	<b>:50</b>
<b>Marks</b>				
<b>4</b>	<b>-</b>	<b>4</b>	<b>Exam.</b>	<b>:100 Marks</b>
			<b>Total</b>	<b>:150 Marks</b>
			<b>Duration of Exam</b>	<b>: 3 Hrs</b>

**Unit 1**

Reliability: Definition, System reliability, Parameter values, Reliability models for hardware redundancy – Testing: Various testing methods.

**Unit 2**

Fault tolerance: Definition, Fault types, Detection, Redundancy, Data diversity, Reversal checks, Byzantine failures, Integrated failure handling.

**Unit 3**

Real Time system: Introduction, Characterizing real time systems, Performance measures for real time systems, Estimating Program run times, Task management and Scheduling – Uni-processor, Fault tolerant scheduling.

Real Time Communications: Protocols, Contention based, token based, Stop and go multihop, the polled bus, hierarchical round robin, deadline based, and fault tolerance routing, Distributed delay constrained method, Dependable real time channels, recovery approach, Establishing real time channels.

**Unit 4**

Programming Languages and Tools: Desired Language Characteristics, Data typing, control structures, Hierarchical decomposition, Packages, Exception handling, Over loading and Generics, Multi tasking, Task scheduling, Timing specification., Flex, Euclid, Environments, Run time support.

## TCS 808:Parallel Algorithms

Ph. D Course Work ( Computer Science & Engg.)				
L	P	Credits	Class Work	:50
4	-	4	<b>Exam.</b>	<b>:100 Marks</b>
			<b>Total</b>	<b>:150 Marks</b>
			<b>Duration of Exam</b>	<b>: 3 Hrs</b>

**Introduction to data and control parallelism.** PRAM model and its variants, EREW, ERCW, CRCW, PRAM algorithms, cost optimality criterion, Brent's theorem and its importance.

Processor organizations such as mesh and hypercube, embedding of problem graphs into processor graphs.. Parallel algorithms for matrix multiplication, merging and sorting for different processor organizations such as mesh and hypercube. Introduction to distributed systems, synchronous / asynchronous network models, leader election problem in ring and general networks; Type of faults, fail safe systems, Byzantine faults, distributed consensus with link and process failures. Algorithms for BFS, DFS, shortest paths and spanning trees in distributed systems. Asynchronous networks: Broadcast and multicast, logical time, global snapshot and stable properties; Network resource allocation.

TCS 809: Natural Language Processing  
**Ph. D Course Work ( Computer Science & Engg.)**

<b>L</b>	<b>P</b>	<b>Credits</b>	<b>Class Work</b>	<b>:50</b>
<b>Marks</b>				
<b>4</b>	<b>-</b>	<b>4</b>	<b>Exam.</b>	<b>:100 Marks</b>
			<b>Total</b>	<b>:150 Marks</b>
			<b>Duration of Exam</b>	<b>: 3 Hrs</b>

**Objective:** To acquaint the students with the concepts, algorithms and applications of natural languages.

### Unit 1

Issues & Motivation: Issues; Motivation; Features of Indian Languages; Issues in Font; Coding Techniques; Sorting & Searching Issues.  
Morphology & parts of speech: Phonology; Words & Morphemes; Segmentation; Categorization and Lemmatization; Parts of Speech; Taggers; Rule Based; Hidden Markov Models; Morphology Issues of Indian Languages; Transliteration.

### Unit 2

Syntax & Semantics: Basic Concept of Syntax; Parsing Techniques; Lexicalized & Probabilistic Parsing; General Grammar Rules for Indian Languages; Semantics; Pragmatics; Fundamentals; Syntax & Semantics; Indian Language View Point; Statistical Techniques in Corpus Based Techniques.

### Unit 3

Mobile application Architecture and Messaging: Building Indian Language Interfaces to Standard Packages; Multilingual Issues; Specialized Tools for Indian Language Processing; GIST Cards; ISCII & Unicode Issues for Indian Languages; Speech Processing & Text to Speech Issues in Indian Languages.

### Unit 4

Application: Online Education Tools in Indian Languages; Web Libraries; IT in Rural, Medical & E - Governance Application in Local Languages; Automatic Taggers; Natural Language Generation; Machine Translation; Information Extraction; Retrieval; Other Applications in Indian Languages.

TCS 810: Approximation Algorithms

**Ph. D Course Work ( Computer Science & Engg.)**

<b>L</b>	<b>P</b>	<b>Credits</b>	<b>Class Work</b>	<b>:50</b>
<b>Marks</b>				
<b>4</b>	<b>-</b>	<b>4</b>	<b>Exam.</b>	<b>:100 Marks</b>
			<b>Total</b>	<b>:150 Marks</b>
			<b>Duration of Exam</b>	<b>: 3 Hrs</b>

**Contents.** NP-hardness and approximation algorithms. Different kinds of approximability. Linear programming and Duality. Randomized Rounding. Covering and packing problems, Facility location, machine scheduling and bin packing, Primal dual approximation algorithms in graph connectivity and Networks design. Multi-commodity flows and cuts. Graph embeddings and their application to sparsest cuts, separators and bandwidth minimization. Feedback arc sets and linear ordering problems, Shop scheduling: Open, flow and job shop. Semi definite programming and application to max-cut graph colouring. Concept of best possible approximation algorithm, Hardness of approximations.

TCS 811: Case Study(Seminar + Implementation)

**Ph. D Cours**

**e Work ( Computer Science & Engg.)**

<b>L</b>	<b>P</b>	<b>Credits</b>	<b>Class Work</b>	<b>:50</b>
<b>Marks</b>				
<b>4</b>	<b>-</b>	<b>4</b>	<b>Exam.</b>	<b>:100 Marks</b>
			<b>Total</b>	<b>:150 Marks</b>
			<b>Duration of Exam</b>	<b>: 3 Hrs</b>

Concerned Teachers/Experts in the selected area must be identified by a scholar for approval of the case study topic. A Scholar is required to analyze and implement the given case study topic and submit **Three** copies of bound report of given case study topic **One** week before the presentation to office of Head/Concerned faculty (examiner) appointed by the Head.

**Few Problems for Case Studies as follows:**

**Objective:** To give the scholar practice in writing various phases of mobile, wireless, software systems & techniques, etc

1. Design a prototype that implements the Cache management for a mobile computing environment?
2. Design a System: The challenges of developing high performance, high reliability, and high quality software systems are too much for ad hoc and informal engineering techniques that might have worked in the past on less demanding systems. New techniques for managing these growing complexities are required to meet today's time-to-market, productivity and quality demands.
3. Peer-to-peer communication system: As computers become more pervasive and homes become better connected, a new generation of applications will be deployed over the Internet. In this model, peer-to-peer applications become very attractive because they improve scalability and enhance performance by enabling direct and real-time communication among the peers. We need to propose a decentralized management system that manages the peer-to-peer applications and the system resources in an integrated way; monitors the behavior of the peer-to-peer applications transparently and obtains accurate resource projections, manages the connections between the peers and distributes the objects in response to the user requests and changing processing and networking conditions.

4. Write programs that implement the few sorting algorithms (bubble, selection, etc) for n data. It stops the operation when the counter for sorting index is at 100, 1000, 10000 and so on, stores the contents of the registers, program counter and partially sorted list of data, etc. It resumes the operation after 30 sec from the point of the termination.
5. Write a program that implements the bubble sort for n data. It stops the operation when the counter for sorting index is at 100, 1000, 10000, and so on, stores the contents of the registers, program counter and partially sorted list of data, etc. It transfers the code and data across the network on the new destination and resumes the operation from the point of termination on the previous node. Finally the result from the last node in the itinerary is sent back to the process-initiating node.
6. Develop a prototype that performs parallel computation of the same task on different nodes. Finally process initiator (master node) receives the result and computation time required to complete the task on an each node and displays to the user. Compare the computing power of different nodes.
